HEAT RATE ENERGY PRODUCTS

Proactively Manage Your Energy Costs

- A heat rate product sets the conversion ratio from natural gas to power, allowing you to opportunistically lock in natural gas prices. This product is well-suited for customers to take an active role in their energy management. A heat rate is a factor that converts monthly natural gas prices to power prices, and it is typically expressed as “(HR x NG) + A” where HR is the contracted heat rate, NG is the locked natural gas price(s), and A is the adder inclusive of the other ancillary and related costs.
- With TriEagle, you can proactively lock all remaining months on your agreement, or individual months as needed. With both long- and short-term volatility risk, this product is appropriate for larger customers with greater risk tolerance. A heat rate product is right for you if you believe future natural gas prices will decline.

TriEagle is a proud member of the Crius Energy family of brands.

NATURAL GAS FUTURES

Chart: Near-term prices for natural gas have recently decreased relative to future prices, creating a premium to NG prices 2015 to 2020. HR products allow you to act on both future opportunities and near-term discounts.

About Us:

TriEagle Energy is a Texas-based retail energy provider specializing in commercial and small industrial businesses. With innovative products, outstanding customer service, and competitive pricing, thousands of business customers have entrusted their power needs with TriEagle since 2003.
